The Company

froglogic GmbH is a software company based in Hamburg, Germany. froglogic was founded in 2003 by two former Trolltech senior software engineers. Given the success of froglogic's products in the market, froglogic is currently growing their development team.

We are the creators of the leading Qt GUI test tool Squish. In addition to the Tcl/Tk/Qt migration framework Tq, we offer Qt consultancy services such as programming jobs, training, Qt porting and migration. Our developers are very experienced in C++ and Qt and we support all platforms such as Windows, Linux, MacOS X, Solaris, HP-UX, AIX, IRIX, FreeBSD and Tru64.

The Customers

We have a steadily growing customer base in industries such as EDA, Network, Pharmaceutical, Transportation and Oil and Gas. The following list includes some of our major customers.

Squish The Leading Qt GUI Test Tool

Squish is the most advanced automated GUI test tool for Qt applications. Squish allows to easily create, record, edit, debug and run automated tests for your Qt application using your favorite scripting language such as Python, Tcl and JavaScript without the need to modify your application.

Squish is, just like Qt, cross-platform. The same Squish test scripts can be used to test your application on Windows, Linux, Unix, MacOS X and Qt/Embedded. All Qt versions starting from 2.3 up to Qt 4.0 are supported.

With Squish you can create robust test scripts which do not depend on screen coordinates. You can work with the tests in an easy-to-use IDE and automate regression testing using Squish's command line tools. This way, Squish can also integrate into existing testing environments.

Tq The Tk/Qt Migration Framework

Tq is a library which eases migration from Tk based applications to Qt. It allows mixing Qt and Tk in one single application which enables you to incrementally port a Tk application to Qt or to embed Tk components into Qt applications.

The Services

You need help porting Qt 3 applications to Qt 4? You need in-depth Qt training? You need assistance designing your new Qt application? You need a specialized Qt control? You need Squish training?

Contact us at services@froglogic.com and you will gain a competent service partner helping you to meet your expectations.

My own personal belief is that if we don't use froglogic Squish, we will be making a big mistake.
